

Razorpay setup for an NGO

A practical process, compliance checklist, website requirements, technical plan and cost summary for Gracepath Development Foundation.

Recommended starting point: domestic INR donations through Razorpay's Donation Payment Button or Payment Page. Add a custom backend later if Gracepath needs donor records, automated reconciliation and advanced receipt workflows.

Prepared for later reference

Research date: 8 September 2026

Location: Kerala, India

Scope: Razorpay onboarding, donations, 80G workflow, website documentation, implementation and pricing

01 Executive recommendation

Gracepath should onboard Razorpay under its actual legal structure - Trust, Society or Section 8 Company - and use the organisation's own PAN and bank account. The first release should accept domestic INR donations only.

For the current site, a Donation Payment Button is the lowest-complexity option. Razorpay documents this product specifically for NGOs and supports preset amounts, donor-chosen amounts and donation receipts. A Payment Page is a good alternative when a branded campaign page or goal tracker is useful.

International donations need special caution. Razorpay's international-payments FAQ currently says NGOs cannot use the international payment feature, while another Razorpay page generically lists NGOs in an onboarding flow. Get written confirmation from Razorpay before advertising or accepting foreign donations.

The current website is a Next.js 16.3 application with no payment API, database or donor-management layer. A button can be embedded quickly; a full integration will require server routes, secure signature verification, webhooks and storage.

02 Account and onboarding process

Follow this sequence in the Razorpay Dashboard:

- Create the account using an official Gracepath email address and phone number.
- Select the correct registered entity type. Do not register the organisation as an individual if it is a registered NGO.
- Enter the legal name exactly as shown on the PAN, registration certificate and bank account.
- Complete CKYC, or use manual document upload if the CKYC record cannot be found.
- Add the organisation bank account and complete Razorpay's bank verification.
- Complete authorised-signatory verification. Video KYC may be required if CKYC is unavailable.
- Activate domestic payment methods and choose automatic capture unless Razorpay advises otherwise.
- Create and configure a separate live Donation Button or Payment Page. Test-mode assets do not automatically appear in live mode.
- Test successful, failed, duplicate and refunded payments before replacing test credentials with live credentials.

03 Documents to prepare for Razorpay

Prepare clear, non-password-protected PDF or image files. Razorpay may request additional documents depending on the organisation's structure and activity.

Category	Prepare
Organisation	Organisation PAN; registration certificate; registered-address proof; cancelled cheque or bank statement in the organisation's name; list of trustees, directors or governing members.
Legal structure	Trust: registered trust deed. Society: registration certificate and bylaws. Section 8 Company: Certificate of Incorporation, MOA and AOA.
Authorisation	Board, trustee or management-committee resolution authorising the Razorpay account, donation collection, settlement bank account and authorised signatory.
Signatory	PAN; Aadhaar, passport, voter ID or driving licence; address proof; phone and email. Keep original PAN and Aadhaar available for Video KYC.
Third-party signatory	Power of attorney or authorisation letter if the signatory is not a trustee, director or authorised office bearer.
Tax status	12A/12AB approval, 80G approval and Unique Registration Number, where applicable; GST certificate only if the NGO is GST-registered; audited accounts or annual report if requested.

Razorpay's current FAQ lists UBO verification for trusts and societies. Follow the Dashboard's live checklist if it asks for UBO details or declarations.

04 Tax and charitable-status workflow

80G is not the same as 12A/12AB. 80G is the approval relevant to a donor seeking an income-tax deduction. Only make 80G claims when the approval is valid for the relevant financial year.

- Collect accurate donor name, full address and PAN or another permitted identity detail when the donor requests an 80G-related certificate.
- Maintain a transaction ledger that matches the Razorpay payment ID, amount, date, donor details and campaign or donation type.
- File Form 10BD for the financial year if Gracepath is approved under 80G.
- Issue Form 10BE to donors after the 10BD process. The Income Tax Department says Form 10BE is generated after Form 10BD and contains organisation and donor details.
- Use Razorpay's automated receipt feature as a payment receipt aid; do not treat it as a replacement for statutory Form 10BE compliance.

05 Documents and pages required on the website

Add a dedicated Donate page before launch. It should make the organisation's identity, purpose and receipt process easy to understand.

- Legal name: Gracepath Development Foundation.
- Registered address and organisation registration details.
- 80G approval number and validity, if applicable. Include the PAN on official receipts and donation information where appropriate.
- 12A/12AB status, if applicable.
- Clear explanation of how donations are used and whether donations are general or campaign-restricted.
- Domestic INR-only notice if international donations are not enabled.
- Official contact email and phone number for receipts, payment issues and refund requests.

Create these linked pages:

Page	What it should say
Donation Terms	Donations are voluntary; no goods or services are being purchased; explain general versus restricted donations; state how payment data is processed.
Privacy Policy	What donor information is collected, Razorpay's role, retention, security, deletion and communication preferences.
Refund and Cancellation	Treatment of duplicate, failed or mistaken payments; whether ordinary donations are refundable; request process and expected timeline.
80G and Receipts	Explain 80G eligibility, donor data requirements, ordinary payment receipts and Form 10BE issuance after Form 10BD reporting.
Contact and Grievance	Named contact channel for payment complaints, receipt corrections and privacy requests.

Do not ask donors for card numbers, UPI PINs or banking passwords. Razorpay should handle payment credentials. Add a consent checkbox for use of donor details for payment processing and statutory reporting.

06 Technical implementation

Option A - Donation Button or Payment Page

Embed Razorpay's hosted donation component in the existing Next.js page. Configure INR, preset amounts, a donor-chosen amount, minimum and maximum values, donor fields and the receipt settings in the Razorpay Dashboard.

This is suitable for the first release because it requires little backend work. The trade-off is limited control over donor storage, campaign reporting and custom receipt automation.

Option B - Custom Standard Checkout

- Create `/api/razorpay/order` as a server-side route. Amounts must be sent in paise.
- Open Razorpay Checkout with the public key ID and server-created order ID.
- Verify `razorpay_signature` on the server using the order ID, payment ID and secret key.
- Add `/api/razorpay/webhook` for captured, failed and refunded payment events. Validate the raw request body and webhook secret.
- Store donor, order, payment, campaign, refund and receipt status in a database. Make webhook processing idempotent.
- Send confirmation and receipt emails through a transactional email service and reconcile settlements monthly.

Keep these values server-side: `RAZORPAY_KEY_SECRET` and `RAZORPAY_WEBHOOK_SECRET`. The key ID may be used in browser code. Webhooks need a public HTTPS endpoint and should return a 2xx response within Razorpay's five-second window.

The existing project is compatible with Next.js route handlers. Its README points to Vercel as a possible deployment target, but the actual production host should be confirmed before configuring the webhook URL.

07 Costs

Item	Expected cost	Notes
Razorpay standard domestic processing	Razorpay currently states 2% + GST on the fee	18% GST on a 2% fee gives an approximate effective deduction of 2.36% of the donation.
Setup and AMC	INR 0 under standard pricing	Razorpay states no setup fee and no annual maintenance fee.
INR 1,000 example	Approx. INR 23.60 deducted	INR 20 processing fee + INR 3.60 GST; approximate settlement INR 976.40 before any separately quoted service.
Optional services	Quote required	Instant settlement and other value-added services may have separate pricing.
Other project costs	Variable	Hosting, domain, transactional email, database and developer work if a custom integration is built.

Razorpay's current pricing page shows a 2.15% figure in one product area but states 2% + GST in its FAQ. Ask Razorpay for a written NGO/non-profit quote before choosing the final plan.

08 Launch checklist

- Legal structure, PAN, bank account and authorised signatory confirmed.
- Registration, tax and 80G documents scanned and ready.
- Written confirmation received on NGO pricing and international-payment eligibility.
- Donate page, Donation Terms, Privacy Policy, Refund Policy and 80G information published.
- Donor fields and consent wording approved by the organisation or CA.
- Test payments completed for success, failure, duplicate and refund cases.
- Receipts, transaction exports and bank settlement reconciliation checked.
- Live button or Checkout deployed only after verifying the real public URL.

09 Sources and verification notes

This guide is based on official Razorpay, Income Tax Department and Ministry of Home Affairs sources reviewed on 8 September 2026. Product screens and commercial terms can change, so the live Razorpay Dashboard and written commercial quote should control the final setup.
